

**Quebex Lamassu setup (non-digital ocean):**

-----

```
sudo -i
apt-get update && apt-get upgrade -y
mkdir /mnt/blockchains
nano /etc/udev/rules.d/70-persistent-net.rules
SUBSYSTEM=="net", ACTION=="add", DRIVERS=="*", ATTR{address}
=="ADAPTER MAC", ATTR{dev_id}=="0x0", ATTR{type}=="1", NAME="eth0"
nano /etc/network/interfaces
change the ens3 or whatever the non-lo interface is references to eth0
shutdown -r now
```

```
sudo -i
curl -sL https://deb.nodesource.com/setup_6.x | sudo -E bash -
apt update
apt install nodejs python-minimal build-essential supervisor postgresql
libpq-dev -y -q
npm config set prefix '/usr'
update ~/.profile with:
export PATH=/usr/bin:/usr/lib/node_modules/lamassu-server/bin:$PATH
source ~/.profile
```

**Download install script:**

```
wget https://raw.githubusercontent.com/lamassu/lamassu-install/nextgen/
install
```

**Add swapoff -a above the command for fallocate**  
**change the npm calls to sudo npm**
